

How Can This Mermaid Help You Unlock Your Plant's Hidden Potential?

Getting people's attention these days can be difficult. So we've decided to get the word out about our enzyme supplement with "Meri". She's the new mascot for Sensizym, the sensible enzyme supplement.

What makes Sensizym so special? So sensible?

It's Not Dead on the Shelf, For One

We're not kidding when we say it's normal for enzyme supplements to be reported completely inert on the shelf, as in, before you've even had the opportunity to waste your money on them.

Enzymes are tricky to keep alive in a bottle. But our team of plant scientists takes pride in their work, so this problem doesn't exist for Sensizym. Which is why Sensizym is guaranteed to perform at full throttle or your money back. See below for details...

How Does It Work?

Sensizym serves two basic functions in your root zone.

1. Turning organic "garbage" into usable food to clean up the root zone.
2. Speed up photosynthetic reactions...

Sensizym contains the widest spectrum of enzymes of any product on the market.

There are 88 types of enzymes in Sensizym, each working to keep your root zone running like a well-oiled machine. These include classes of enzymes like xylanase, cellulase, beta-glucanase, and

hemicellulase, just to name a recognizable few for the plant science nerds out there.

Here's the simple arithmetic: multiply the speed at which your plants photosynthesize by a significant factor, and then add that to the extra growing power your plants have from not only a clean root zone, but the extra high-quality food that the enzymes are feeding to your roots. Bigger, more profitable plants? You bet.

The Sensizym Guarantee

Sensizym is guaranteed to be fully active at the time of purchase. If you're not thrilled with how Sensizym improves the size and quality of your plants, return the unused portion for a full refund of the purchase price (remember to bring your proof of purchase).

Read what growers are saying about Sensizym!

Jay, from Earlysville, Virginia "I started using Sensizym to get more out of Piranha, Voodoo and Tarantula. I saw that my veg phase plants grow faster now, and the roots are stronger. The rockwool is cleaner. This stuff works!"

Bryan Eichorn "Three Part, Big Bud, Overdrive, Sensizym, Bud Candy- Nuff said."

Luke, from Chico, California "To be honest, I have no idea what an enzyme is or what it does. I bought this because the hydro store guy said to when I was having problems with root rot. Well I don't have the root rot problems anymore and I also see that Sensizym made the plants bushier. So I think this is a great product for sure."
